High Efficiency and Low Consumption

P5 Safe and Comfortable Cab Environment

> P9 Equipment Specification

HIGH EFFICIENCY AND LOW CONSUMPTION

Faster Working Speed

Swing speed12rpm

- High-power Engine
 72.7kw/2200rpm
- Larger Workload
 Bucket Capacity0.53m3

Larger Digging Force Digging force of bucket 92.7kN Digging force of arm 66.13kN

Engine

The engine output power is 72.7kW with the increased hydraulic power and improved fuel efficiency.

SY135C adopts the engine customized for Sany. The engine with four-cylinder, four- stroke direct-injection turbocharger, provides strong operating power for the machine.

Optimized Power Control

The engine is designed with four working modes. The working mode can be changed on the monitor according to different applications, which can maximize the operating efficiency and reduce the fuel consumption.

The Electric Control Module to Achieve The Best Engine Efficiency

The electric control module has the capability of making quick response to the change of operating variables in order to achieve optimum engine performance. It is fully integrated with sensors of fuel, engine oil, air intake, coolant and exhaust systems to conduct the real-time monitoring and auto adjustment on the system conditions, which can ensure the engine won't overload when the excavator works with full load.

Innovative Electro-hydraulic Control System

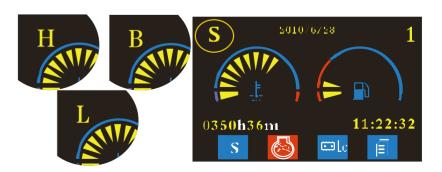

With a dual-pump, dual-circuit constant power control system, the engine can fully develop its power to provide a strong operating force. Optimized operation performance of the engine reduces the loss of power.

Through the electrical control (ESS control), such as engine throttle position feedback, the engine speed monitoring, and power limit regulation, as well as the hydraulic control (HSS control), such as main pump positive flow control, straight-travel proportional control, swing-priority proportional control, and bucket confluence proportional control, the engine can have a real-time power match with hydraulic pumps, which improves operational productivity and reduce fuel consumption.

An advanced computer dynamic control system (CDCS) determines engine output power as per the external load demand, achieving the optimum control of excavator – external load operation system.

Operating Priority and Fuel-saving Priority Working Modes

- Heavy duty mode: Full power output provides efficient operation.
- Standard mode: 90% of the rated power reduces fuel consumption and noise.
- Light duty mode: 80% of the rated power ensures fuel economy.
- Break mode: 90% of the rated power reduces fuel consumption

QUALITY PARTS AND COMPONENTS PROVIDING BETTER RELIABILITYAND DURABILITY AND LONGER SERVICE LIFE

The engine customized for SANY gives high efficiency, low fuel consumption and high reliability while fully guaranteeing the excavator's stability in continuous operation under severe weather conditions and satisfying customers for requirement of engine stability.

Four Cylinder Diesel Engine

SY135C adopts the engine customized for Sany. This engine provides strong operating power and ensures high reliability and stability of the machine as a whole.

Displacement 4.329L

The engine power of SY135C is 72.7kW, and the displacement is increased to 4.329L, which reduces the engine heat load and gives a longer service life.

Excellent Cooling Effect

Fan quard: The radiator fan is enclosed with a protective net cover that prevents objects from falling into the fan to damage its blades.

Serially arranged coolers: water radiator, oil radiator, intercooler and condenser are arranged side by side; the aluminum radiator gives better cooling effect.

Reliable Electronic Components

Special electronic devices have undergone severe test. Controller / sensor / heat conductors

Track Rollers, Carrier Rollers, Idlers and Tracks

Track rollers, carrier rollers and idlers use seal-in lubrication that gives a longer service life. The application of grease ensures the durability of track pins and shafts, and reduces travel noise.

Wearable Bucket

Standard reinforced bucket with highly rigid steel sheet, tips and side cutters can serve a longer period.

Quality Parts with High Durability and Reliability

The principal parts and components, such as the main pump customized for Sany, the main valve, swing unit, travel unit, pilot control valve, are of excellent performance.

performance.

Capability Against Distortion and Bending Excellent High-strength Machine Body

Reinforced X-frame modeled with digital tools, through finite element analysis on loading capacity, realizes high-strength structure.

common construction.

Reinforced Boom and Arm

The boom and arm use large-box structure, in which welded plates against torsion form a compact, strong and durable integrity that prevents deformation under larger digging force. With optimized design, the boom and the arm can provide considerable working range and depth on the occasion of ditching, excavating and

The tri-grouser track shoe rolled with high-strength alloy provides favorable contact, stability and durability. The track links have additional reinforced ribs to increase their strength, which can absorb the shock when the machine travels on rough surface.

High-strength Swing Platform

Reinforced plates, welded on the two main beam of swing platform, considerably improve the bending resistance

Track Link and Tension Mechanism

The track links have additional reinforced ribs to increase their strength, which can absorb the shock when the machine travels on rough surface.

The tension adjusting device is more reliable due to the adoption of a serially-arranged system that includes a grease-in tensioning cylinder and a damper spring.

COMFORTABLE AND SAFE CAB ENVIRONMENT

Innovative Large Cab

The innovative large cab is equipped with an adjustable seat with suspension. The seat can be adjusted as desired. The rigidity of seat can also be adjusted according to the operator's weight.

Longer Control Levers

The control levers and joysticks designed and arranged according to ergonomic, can be operated easily. Each operation button is within the reach of operator.

Pressure Sealed Cab

The sealed design ensures that the air pressure inside the cab is higher than outside, thus preventing the dust invasion.

Automatic Air Conditioner

The standard large-capacity air conditioner keeps in-cab air fresh by purifying fresh air and recirculation air. The quick temperature control ensures a comfortable temperature in cab all the year round.

Silicone Rubber Shock Absorber

innovative silicone rubber shock absorber is fixed to the swing platform in six points, which has minimized the shock brought by rough road and engine or hydraulic impact, considerably increased the stability of cab, and improved the comfort of operator.

High-strength Top Plate

The top plate of cab is punch-formed with thick high-strength steel sheet integrated with reinforced ribs.

Has good impact resistance, in a rockfall, not easily deformed under operating conditions; optional OPG top guard and the front window safety net.

The door and windows are made of toughened glass. In addition to the seat belt equipped, the cabin maximizes the safety of operator.

Heat Insulation/ Fan Guard

The engine is housed in excellent heat insulation to prevent accidental burns.

The radiator fan is enclosed with a protective net cover that can prevent objects from falling into the fan to damage its blades.

Anti-tipping and Falling Object Protection Structure

The cab is punch-formed with thick high-strength steel sheet, in addition to toughened glass windows and seat belt, safety of operator is best ensured in the cab.

Pump/Engine Screen

The pump chamber and engine chamber are separated with a screen, which can prevent leaked hydraulic oil from splashing onto the hot engine.

Anti-skid Plates

The anti-skid plates with the star-shaped punching holes are covered the main valve and air filter, and the anti-skid films are provided on the machine body to prevent people from slipping during maintenance.

Large Rear View Mirror and Alternate Exit

Rear view mirror is mounted on both sides of the cab, which can observe the situation behind the excavator without looking back.

A cab window for alternate exit is also provided for operator to escape in case of emergency.

Easy-cleaning Floor Mat

The floor mat can be washed with water. With a self-drain water port, the floor mat can be cleaned easily without removal.

EASY MAINTENANCE

The use of OEM parts and quality elements effectively extends the service life and maintenance intervals. The time for maintenance is also reduced. Remote installation of replacement parts gives easy maintenance, higher utility and lower service cost.

Serially-arranged Cooling Units

Coolant radiator, oil radiator, intercooler and condenser are placed side by side for easy cleaning and maintenance. The aluminum radiators not only give good cooling effect but also can be recycled.

Incline Track Frame

The incline track frame makes the soil to fall easily and is easy to clean.

Large-capacity Fuel Tank with Anti-rust Treatment

The large capacity of fuel tank reduces the times for refueling. Interior of the fuel tank has been treated well against rusting. No rusting will occur even if the tank is soaked in oil containing water and phosphoric acid and other chemicals for a long period of time.

Opening the left rear access door allows you to access the engine radiator. The radiator is protected with a net to prevent invasion of foreign substances. You are only required to remove and clean the net.

Bottom Drain Plug

The radiator, fuel tank, hydraulic oil tank and oil pan are equipped with screw plugs at the bottom, which is convenient for discharging foreign substances and waste liquid out in the change of oil or cleaning.

Standard Engine Oil Drain Valve

Easy-to-use Reliable Engine Hood Spring and Securing Bar

The engine hood is installed with a spring that can help you open the engine hood easily for engine service. The hood can be secured with the bar during maintenance or service of the machine in order to prevent injury caused by wind.

Easy Cleaning of Radiator

The use of this valve can prevent contamination of your clothes and the floor when engine oil is changed. This valve also makes maintenance of the machine easy.

STANDARD OPTIONAL

STANDARD EQUIPMENT

Engine

- Engine Mode control (H, S, L and B)
- Start motor 24V/5KW
- Alternator 24V/50A
- Air pre-cleaner
- Dry double-filtering air cleaner
- Cylindrical engine oil filter
- Engine oil cooler
- Radiator with protective screen
- Auxiliary water tank for radiator
- Fan cowl
- Separately installed engine
- Automatic deceleration system

• Toughened light-color window

• 6 sillicone rubber damping support

• Openable roof hatch, upper front

• Accelerating system

Operator Station

 Hydraulic track tensioner Bolted sprocket

• Oil suction filter

• Oil return filter

Undercarriage

• Travel brake

Pilot filter

- Noiseproof steel-structured cab

 - 500 mm track shoe
 - Reinforced side pedal
 - Bottom coverplate

Swing Platform

· Adjustable inclined seat with adjust-Hydraulic oil level gauge

Toolbox

• Swing brake

Indicator Lights

temperature

- AM-FM radio with digital clock
- Foot rest and floor mat

windowand left window

• Rear window, alternate exit

Silent window wiper with washer

- Loudspeaker, rear view mirror
- Seat belt and fire extinguisher
- Cub holder and cab light
- Ashtray, alternate hammer
- Storage box, literature bag
- Hydraulic lockout control
- Fully automatic air-conditoner

able armrest

Cab visor

Monitoring System

- Hour meter, fuel tank oil level gauge
- Engine coolant thermometer
- Engine oil pressure gauge

11

Hydraulic System

- Working mode selection switch
- Power enhancement device
- Control valve with main relief valve
- Spare oil port for control valve

Front Work Equipment

- Flange pin
- Bucket clearance adjustment
- Welded lever
- Central lubrication system
- Dust ring-seal of bucket pin
- 4.7 m fully-welded box boom
- 3.3 m fully-welded box arm
- Guard
- 0.53m3 standard bucket

Alarm Lights

- Oil pressure lack, engine coolant overheat
- Throttle knob fault
- Fuel oil lack
- Voltage higher than specification
- Engine over speed

Others

- Standard battery
- Lockup engine hood
- Lockup fuel filler cap
- Anti-skid film, handhold and passage
- Travel direction mark
- Hand grease gun

• Auto-idle, engine warm up · Engine oil level, engine coolant

- Travel motor guard • H-track guiding mechanism
- Double carrier roller and track roller • Reinforced track link with pin and seal
- Rear view mirror (R and L)
